Profile

Back-End Developer with 1 year of experience building scalable and secure web applications using Java Spring Boot and RESTful APIs. Proficient in Spring Framework (Boot, Data JPA, Security) and data base cosign with MySQL anti PostgreSQL. Skilled in developing microservices architectures, implementing WT arki OAuth2 authentication, and optimizing system performance through caching and query turing.

Experienced with Docker, CI/CD pipelines, and cloud deployment on AWS. Known for writing clean, maintainable, and well-documented coda, following SOLID arinciples and dasiga patterns. Adeat at collaborating in agile taarms, integrating with front-end frameworks [React.js], and delivering production ready, enterprise-grade backend solutions

Professional Experience

Back-End Developer, *Self employed*

Remota

Building secure ar
calable back-end systems using. Spring Boot, RESTful
APIs, and MySQL/PostgreSQL for freelanca and private projects. Delivered 5-Spring
Boot applications with strong authentication, optimized data base structures, and
clean, maintainable code. Implemented JWT authentication, RBAC authorization,
and industry-standard security practices to protect API endpoints.
Designed and optimized RESTful services using caching, indexing, and efficient SQ
queries. Integrated bacle end systems with React/JavaScript front ands via
Axios/Fetch, ensuring smooth data flow. Utilized Docker, GitHub, and CI/CD
pipelinas for automated builds and deployments. Consistently translated client
requirements into robus, technical solutions while delivering projects on time.

Skills

Programming Languages

Java (8-17), JavaScript (ES6)

Databases

- MySQL
- PostgreSQL

API Development

- RESTful APIs, JSON, Swagger/OpenAPI,
- Postman

Architecture & Design

- Microservices
- SOLID Principles
- Design Patterns, DDD

DevOps & Deployment

- Docker
- Dacker Compose
- AWS
- Git, GitHub

Languages

- Arabic (Native]
- English (Good)

Frameworks & Libraries

- Spring Boot, Spring MVC, Spring Data JPA,
- Spring Security, Hibernate

Projects

Student Management System, (2025)

A robust full-stack web application developed using Java with Spring Boot for the backend and JavaScript, HTML, CSS, and Bootstrap in the frontend. The system efficiently manages student data with full CRUD (Create, Read, Update, Delete) functionality, demonstrating expertise in web architecture, RESTful API development, and responsive user interface design. The project emphasizes clean code practices, modularity, and scalability, ensuring seamless integration between frontend and backend. By handling real-world student data workflows, it showcases advanced skills in full-stack development, database interaction, and UX optimization.

BankApp-Banking Application, (2025)

Technologies/Concepts: Java 8, Spring Boot, Spring Security, RESTful API design, H2 in-memory database, Lombok, Swagger (Springfox!)

Built a secure backend banking system that simulates real-world banking operations through RESTful APIs. The system supports CRUD operations for customers and accounts, handling deposits, withdrawals, and internal fund transfers. Incorporated Spring Security to authenticate and authorize users, ensuring protected access to API endpoints. Used H2 in-memory database for rapid development and testing, while Lombok reduced boilerplate code for cleaner implementation. Exposed API documentation via Swagger, making it easy to explore and test the endpoints. Focused on modular architecture, clean code, and reliable data operations.

Quiz App Spring Boot Application, (2025)

Technologies/Concepts: Java, Spring Boot, Spring Security, Thymeleaf, MVC, MySQL, Bootstrap, Event Listener

Developed a full-stack quiz web application backend with Spring Boot, featuring user registration/authentication, role-based access (admin and user), and real-time quiz participation. Implemented Spring Security for authentication, including a "Remember Me" feature, and protected admin-only quiz management endpoints. Built server-side rendered views using Thymeleaf for user dashboard and admin panel. Used MySQL to persist users, quizzes, questions, and quiz results. Designed responsive UI with Bootstrap to ensure usability across devices. Included event listeners to track key user actions like login, quiz start, and quiz completion, improving insight into behavior.

Library Management System - Java Application, (2005)

Technologies/Concepts: Java SE, Object-Oriented Programming (OOP)-Classes, Inheritance, Encapsulation, File I/O, Console-based Interface

Developed a Library Management System using Java, designed to simulate real-world library operations. The system manages books, users, borrow/return transactions, and reservation requests. Implemented core OOP principles such as encapsulation, inheritance, and modular class design to ensure maintainable and reusable code. Incorporated file handling to persist data and exception handling to manage invalid inputs and operations. Focused on creating a console-based interface that is intuitive, reliable, and capable of handling multiple user interactions while maintaining data integrity.

GUI Chat Application Java Desktop Chat System, (2025)

Technologies/Concepts: Java SE, Socket Programming (TCP), Multithreading, Swing GUI, Client-Server Architecture

Developed a desktop real-time chat application using Java Swing for the graphical user interface. Implemented a client-server architecture leveraging TCP sockets to allow multiple users to connect. Used multithreading on both server and client sides to support concurrent connections and real-time message exchange. Focused on robustness with input validation, error handling, smooth UI updates. This project highlights hands-on experience in network programming, GUI development, and concurrency in Java.

Java.

SpringBoot-Reactjs E-commerce (2025), (2025)

Technologies/Concepts: Java 17+, Spring Boot, Spring Data JPA, RESTful APIs, ReactJS, Vite, Axios, Bootstrap, MySQL, Navern

Built a full-stack

mmerce web application using Spring Boot fortina hackend and ReactJS with Vite for the frontand. Developed RESTful APIs with Spring Data JPA to manage product catalog operations (CRUD) and integrated them with a responsive Read terface using Axios for seamless data flow. The backend persisted data in z MySQL database, while Maver managed dapendencias and build l'fz-cycle. The frontend provides a cleart, dynamic UI thel fetches product. l'stings, displays them to ers, and is structured in reusable React components. Focused on modular architecture, maintainability, and eating a solid foundation for extending Features T'ke user authentication, cart management, and order processing in future iterations.

Spring Boot Blog Application, (2005)

Technologies/Concepts: Java 21, Spring Boot, Spring Security, RESTful APIs, MVC Architecture, MySQL, Lomask, Docker, Mavan

Developed a micro-blogging application beckend using Spring Boot, enabling users to creele, view, and manage blog posts with attachments. Implemented secure RESTful APIs with Spring Security to handle authentication and authorization. Applied MVC architecture to ensure cleen seperation of concerns and mal

modular code

Integratec Lombok to mouca asile plate code and Dockar for containerized daployment and environment consistency. The application supports MySQL for persistent data storage and allows flexible development using Waven for build and dependency management. Focused on building a scalable and robust backend system capable of handling lypical blogging operations while ensaring high code quality and test coverage.

Certificates

Oracle Certified Associate, Java SE 8 Programmer

Issued By: Oracle University

Description: Achieved official Oracle certification demonstrating strong proficiency in Java programming, including object-oriented design, exception handling, data types, control structures, collections, and functional interfaces. Validated skills in writing efficient, modular, and maintainable Java code aligned with industry standards.

Front-end Development Diploma

Issued By: Lrazsof: Academy

Duration: months

Description: Completed a professional diploma focused on front-end web development, covering modern web technologies including HTML5, CSS3, Javascript, Responsive Design, and UI/UX principles. Gained practical experience building interactive web interfaces and implementing front-end best practices to create dynamic, user-friendly applications.

Spring Certified Professional

Issued By: VMware Learning

Description: Earned an industry recognized certification validating practical skills in building Java Spring applications. Demonstrated proficiency in Spring Boot, REST API development, dependency injection, application configuration, data access with Spring Data JPA, and security implementation using Spring Security. Confirmed ability to create efficient and maintainable backend services following Spring best practices.

Core Java Programming Course

Issued By: Rooman Technologies

• Grade: A

Description: Completed hands-on training in core Java concepts, covering object-oriented programming, data types, control statements, classes, interfaces, collections, and exception handling. Gained practical experience implementing Java programs and applying fundamental design principles in real-world scenarios.
